

Digecin

Ideal Remedy for Digestive & Carminative Disorder

Description:

Digecin syrup eliminates stomach weakness, liver weakness, flatulence, gas-induced stomach pain, indigestion, and indigestion. Digecin improves the metabolic function of the liver and cures constipation. Digecin syrup does not act directly on the food consumed, but rather strengthens the digestive system and helps in digestion. It controls the rhythm of the digestive system, thereby curing indigestion, flatulence, acid reflux, gas-induced chest pain, loss of appetite, belching, and nausea. The herbs used in digecin contain tannins, ascorbic acid, and citric acid, which regulate the circulation of the digestive system (Irbisa saravasvabhah) and thus reduce constipation and relieve inflammation of the liver. All the synthetic medicines available in the market directly weaken the pancreas. But digescin strengthens all the organs of the digestive system and its supporting organs such as the liver, pancreas, salivary glands and helps in the secretion of sufficient amounts of trypsin, lipase, amylase, salivary juice and bile salts, resulting in better indigestion.

Ingredients: Every 5 ml contains
